

Harnessing the Power of the Sun: Gloria Bull

In the military, they teach you how to adapt with change real rapidly. When I moved from engineering to renewable energy, I was willing to take on the challenge to move with the change and adapt with the technology.

My name is Gloria Bull. I'm a Renewable Energy Project Manager with Dominion Energy.

When I think of my job, I think of as like a parent. When you're raising your kids, you're trying to direct them and make sure they do the right thing so they can reach their highest potential.

With solar, it's like I'm just trying to provide that support to the technicians or the personnel on the site to make sure that the site is performing to its optimum level.

We want to represent the community in which we serve, and we want to make sure that we have a clean environment and that we preserve the earth as much as we can, and I think renewable energy is just our way of doing that.

What I love most about my job, is that it's different every day. What's going be the future of that project? What do you need to do and put in place? So, it's ever evolving an everyday challenge, so it's very exciting.
