

Building the Next Generation of Clean Energy: Lloyd Eley

My name is Lloyd Eley.

I'm the manager of project construction for Dominion Energy.

The best part about my job is being able to serve my community by providing clean power.

The Coastal Virginia Offshore Wind project consists of turbines being installed in the ocean, and when the wind blows, those turbines spin and generate electricity.

Seeing the wind turbines in person, I was overwhelmed with excitement just looking at the detailed engineering of the actual wind turbine itself.

I also had an aha moment knowing that this was the first of a kind project for the as well as the first of a kind project for Dominion Energy, and marked a major milestone for clean energy in the US.

So outside of work, I like to mentor the youth that are interested in STEM fields. That is my give back to the community.
