Trowbridge Substation Solar Interconnection and Transmission Line Rebuild Project

Dear Neighbor:

At Dominion Energy, we are committed to keeping you informed about our work in your community. We want to let you know that you may see us on or near your property as we conduct surveys and soil borings for the Trowbridge Substation Solar Interconnection and Transmission Line Rebuilds project. You are receiving this letter because we have identified a soil boring test location on or near your property in the existing electric transmission right of way.

Beginning in March 2024, Dominion Energy and contractor crews will be on or near your property to perform soil boring tests. These tests help ensure foundations will provide adequate stability for electric transmission structures. The soil boring process involves using heavy equipment to drill holes, sample the soil, and assess its makeup. The holes will be refilled after testing is complete. A video with detailed information about the soil boring process and images of the equipment used is available in the construction section on our learning portal at powerlines101.dominionenergy.com.

We appreciate your patience and understanding as we prepare for this project. We encourage you to reach out with any questions. Contact us directly by sending an email to powerline@dominionenergy.com or calling 888-291-0190.

Sincerely,

A handwritten signature in black ink, appearing to read "Max Payeur".
